EDUCATION

University of Washington

Seattle, WA

B.S. Electrical and Computer Engineering, Cum Laude, GPA: 3.9

Sept. 2022 – March 2025

- **Concentrations:** Embedded Systems, Computer Architecture
- **Relevant Coursework:** Data Structures & Algorithms, Embedded Systems, Databases, Computer Architecture

EXPERIENCE

Software Development Engineer

Aug. 2025 – Present

Amazon Music

Seattle, WA

- Maintain and extend backend voice orchestration services for Amazon Music processing ~100K+ TPS worldwide across Alexa, Siri, and Google Assistant integrations
- Implemented org-wide region migration across core voice services via CDK and CloudFormation, included configuring VPC networking and verifying cross-region data consistency to minimize customer impact
- Delivered backend Voice UX features surrounding playlist management, video podcast playback, and casting improvements across Java Spring microservices in coordination with Alexa partner teams
- Developed across AWS services including ECS, Fargate, Lambda, DDB, SQS, SNS, and S3 via CDK and Cfn

Teaching Assistant – Embedded Systems

Jan. 2025 – March 2025

Paul G. Allen School of CSE @ University of Washington

Seattle, WA

- Evaluated C/C++ programming assignments for 70+ students on the ESP32 microcontroller
- Assessed student implementations of various embedded systems concepts, including interrupt handling, Memory management, GPIO register manipulation and scheduling

Teaching Assistant – Computer Architecture

Sept. 2024 – Dec. 2024

Paul G. Allen School of CSE @ University of Washington

Seattle, WA

- Hosted 20+ office hours a week to help 80+ students with assignments regarding HDL development, CPU architecture, and memory systems
- Led lab demonstrations to help students debug and verify functionality of their designs in SystemVerilog
- Evaluated student comprehension through verbal reviews of CPU component implementations

PROJECTS

Collaborative Real-time Sudoku Game

Spring 2025

- Deployed a full-stack web application using Maven, React, Websockets and Docker
- Implemented a Java backend with thread-safe data structures to manage data for multiple simultaneous sessions
- Designed a JavaScript frontend with comprehensive UX features, including real-time player position tracking, candidates functionality and solution validation

Embedded Systems Wildfire Detection Capstone

Winter 2025

- Led a team of Five EE and CS students in developing a fire risk and detection system using a Pi 4, STM32, sensor suite, and computer vision
- Wrote Python firmware for Bluetooth communication, UI rendering, and API weather data integration
- Trained a TensorFlow model for image-based fire detection; handled preprocessing of dataset images

TECHNICAL SKILLS

Languages: Java, TypeScript, SystemVerilog, C/C++

Software: CI/CD, Networking, Spring, Docker

AWS Services: Lambda, ECS, Fargate, IAM, CDK, DDB, VPC, SNS, SQS, S3
